SS-HPC500

Handheld Pressure Calibrator Model HPC500 Family

JOFRA HPC500 calibrators feature deadweight tester accuracy in a modern digital package. The HPC is available as an independent calibrator or in one of 6 ready-for-test systems that are complete and equipped to meet any need for pressure calibration.

The HPC500 may be used in a very broad range of applications from simple tool type jobs to complex calibration jobs in custody transfer systems.

The JOFRA HPC500 calibrators introduce a new generation of AMETEK handheld pressure calibrators. This series has been designed to meet high accuracy pressure calibration applications and facilitate your tasks. The HPC offers features such as user configurable information display, 15 different pressure units, transmitter supply, mA input, % error calculation, voltage measurement, serial communication, and external pressure module capability. The accuracy of the HPC500 calibrators is specified in % of reading to ensure an even better accuracy and wider applicable pressure range. The HPC is temperature compensated from 0 to 50°C / 32 to 122°F for on-site operation. It is a truly superior pressure calibrator for laboratory and field use, bringing laboratory accuracy into the field.

The JOFRA APM series of pressure modules extends the application base of the HPC calibrators by allowing calibrations in additional ranges. The APM modules are compatible with several other JOFRA calibrators.

Calibration of the instrument may be performed locally without returning the HPC unit to the manufacturer. Adjustment software is part of the design - you just need an accurate pressure reference and a PC. If factory calibration is required, the pump and the calibrator are independent units and only the calibrator needs to be returned.

JOFRACAL CALIBRATION SOFTWARE

Compatible with 2010 software release

JOFRACAL calibration software ensures easy calibration of RTD's, thermocouples, transmitters, thermoswitches, pressure gauges and pressure switches. JOFRACAL can be used with JOFRA DPC-500, HPC600, HPC500, HPC502 and IPI pressure calibrators, all JOFRA temperature calibrators, as well as JOFRA AMC910, ASC300 multi signal calibrator and ASM-800 signal multi scanner. When used with JOFRA ASM-800 signal multi scanner, JOFRACAL can perform a simultaneous semiautomatic calibration of up to 24 pressure and/or temperature devices under test in any combination.

JOFRACAL software controls the complete calibration procedure, stores the results and provides a calibration audit trail through hard-copy certificates. All calibration data are stored for each sensor to monitor drift and optimize recalibration intervals. A scheduler feature allows planning of future calibrations.

The JOFRACAL temperature calibration software may be downloaded free of charge from our website.

JOFRA APM pressure module

The JOFRA APM external pressure modules extend the range of the JOFRA HPC. There are more than 60 models available with gauge, absolute, differential, and vacuum pressure references, in metric and imperial engineering units.

The modules are engineered for in-plant, field, or laboratory use. They are ready-to-use with the JOFRA HPC and the protocol allows for immediate recognition and use of the module once it is plugged into the calibrator.

HPC500, System E

- EXX/0 to 700 bar (10,000 psi)

This system consists of an HPC calibrator together with a rugged, hydraulic, high pressure pump.

System E is an easy-to-use calibration system. The hydraulic pump makes it very easy to prime the system. The calibrator can be adjusted to fit the best viewing angle. The system includes a manifold for connection of two test devices and the fine adjustment volume adjuster is standard.

The System E comes in a carrying case with cut-outs for fittings and the complete assembled calibration unit - no time adder to assemble the unit before use. Easy and fast connection between pump and calibrator makes it easy to use the pressure calibrator separately for other pressure test jobs.

HPC500, System F

- FOx/0 to 700 bar (10,000 psi) oil
- FWx/0 to 700 bar (10,000 psi) water

System F is an easy-to-use calibration system. The hydraulic pump makes it very easy to prime the system. The pump contains 1.23 l of liquid.

The system includes a manifold for connection of two test devices and the volume adjuster for fine adjustment is standard. System F comes in a protective carrying case with cut-outs for fittings. Easy and fast connection between pump and calibrator makes it easy to use the pressure calibrator separately for other pressure test jobs.

The pump is designed for high pressure applications up to 15,000 psi (1,000 bar). The pump and system may be ordered with either oil or a water/alcohol mixture as pressure medium. The pump is constructed of 300 series stainless steel and Monel allowing for the use of other hydraulic media. There are three available seal packages for the system: Buna-N, Viton®, and EPT.

Type T pump for system F

The Type T pump features a dual pressure output manifold, volume adjuster (up to 200 bar / 2,900 psi), relief valve, and dual volume control for rapid pressure increase at lower pressures and easier pumping at higher pressures.

ACCESSORIES

Rechargeable battery kit - Option B

The HPC500 is available with a set of 4 rechargeable AA batteries and a charger.

Useful soft case - Option C

The HPC500 can be delivered with a soft case as an option. The handy soft case is designed for protection during transport. The soft case has separate compartments for HPC500 (w/Velcro strap), test leads, test hoses, temperature probe, and JOFRA APM pressure module. A shoulder strap ensures convenient transportation when climbing ladders, etc. and the handy strap on the back makes it possible to hang the instrument on a valve, ladder etc. The manual and calibration documents fit into a pocket on the front of the soft case.

Interface kit - Option I

Special LEMO to Sub D, RS232 interface cable for HPC500 and HPC502.

Temperature sensor - Option T

To utilize the thermometer utility of the HPC500 family, a ruggedized handheld temperature sensor is available. The sensor comes as a ready-to-use probe with handle and coiled cable with LEMO connector for HPC500 and HPC502. The sensor is built with a high accuracy Pt100 element, accuracy $\pm 0.05^{\circ}\text{C}$ / $\pm 0.27^{\circ}\text{F}$. Sensor dimensions, without handle and cable, \varnothing 4x200 mm/stainless steel.

Complete calibration systems

The HPC500 is available as a calibrator only or one of 6 ready-for-test systems that are complete and equipped to meet your pressure calibration needs.
