

NeutronRAE II

Personal Radiation Detector

An intrinsically safe, rapid detector of gamma and neutron radiation sources

NeutronRAE II is the first personal radiation detector to provide rapid detection of both gamma and neutron radiation sources even in potentially flammable environments. Certified intrinsically safe and water-immersible for chemical decontamination purposes, the NeutronRAE II can be safely used in more environments than any other personal gamma and neutron radiation detector.

Fast Response

The sensitive Cesium Iodide (CsI) gamma scintillator and Lithium Iodide (LiI) neutron scintillator of the NeutronRAE II provide a fast response to radiological threats.

Loud Alarm

NeutronRAE II alerts the wearer with a loud audible buzzer, big, bright flashing LEDs, and a built-in vibration alarm. For stealth operations, users can disable each alarm individually.

Water Resistant

Immersible (IP67) design makes for reliable operation in wet environments and easy decontamination.

Dose Accumulation

The NeutronRAE II accumulates approximate total dose from gamma radiation. Stored dose data can be cumulative or cleared and reset for each use period.

Intrinsic Safety (IS)

IS certification permits operation in potentially flammable/explosive environments.
