# CR1000KD Portable Keyboard Display

- Compact, easy to use hand-held keyboard display
- Allows user to check and edit data & system parameters onsite
- Displays up to 8 lines x 21 characters
- Bit mapped graphical LCD
- Supports the use of custom menus
- Can be used at multiple sites
- 16 Character Keyboard
- Suitable for our CR1000 & CR800 data loggers

**Ever needed to edit your program or check your data in the field without a laptop ?**

**Well now you can with our CR1000 Keyboard display!**

Our compact, easy to use keyboard display is a powerful tool for onsite maintenance and inspections.

Connecting to the data logger via the CS/IO port, the CR1000KD allows you to check and edit information without the need for a PC.

Suitable for our CR1000 and CR800 data loggers, the display is capable of editing programs as well as checking and setting values in the public, status and data tables. Data configuration, visual graphing and file handling options can also be performed.

Custom menus provide users with additional flexibility, allowing you to present and edit key parameters and settings in easy to navigate, user defined screens. Created in the logger program, these menus can vary from site to site but are accessible with a single keyboard display - a useful feature for untrained operators.

## Specifications

- Weight: 272g
- Dimensions: 10.2 x 15.2 x 1.5 cm
- Operating Temperature Range: -25° to +50°C

## Software, Support & Accessories
